Project Overview

Mainly two role play

- **User**
- **Admin**

1) Admin

Admin will be able to view, add, delete, update user and services, once the login credential is authorized.

2) User

User should be able to view the It services provided by the company and place the order for the same.

Project Break-Up

➤ Back-End

For back-end ,Spring Boot framework is used.

This project is created using Spring initializer.

➤ Front-End

For Front-end ,Angular framework is used.

Spring Boot

Spring Boot is built on the top of the spring and contains all the features of spring.

Spring Boot is a microservice-based framework and making a production-ready application in it takes very little time.

Spring Initializr

Spring Initializr is a web-based tool using which we can easily generate the structure of the Spring Boot project.

Angular

Angular is a development platform, built on typescript. As a platform, Angular includes:

- A component-based framework for building scalable web applications

Tools Used

- UI is run in VS Code
- Back-end is handled using Spring-tool-suite.
